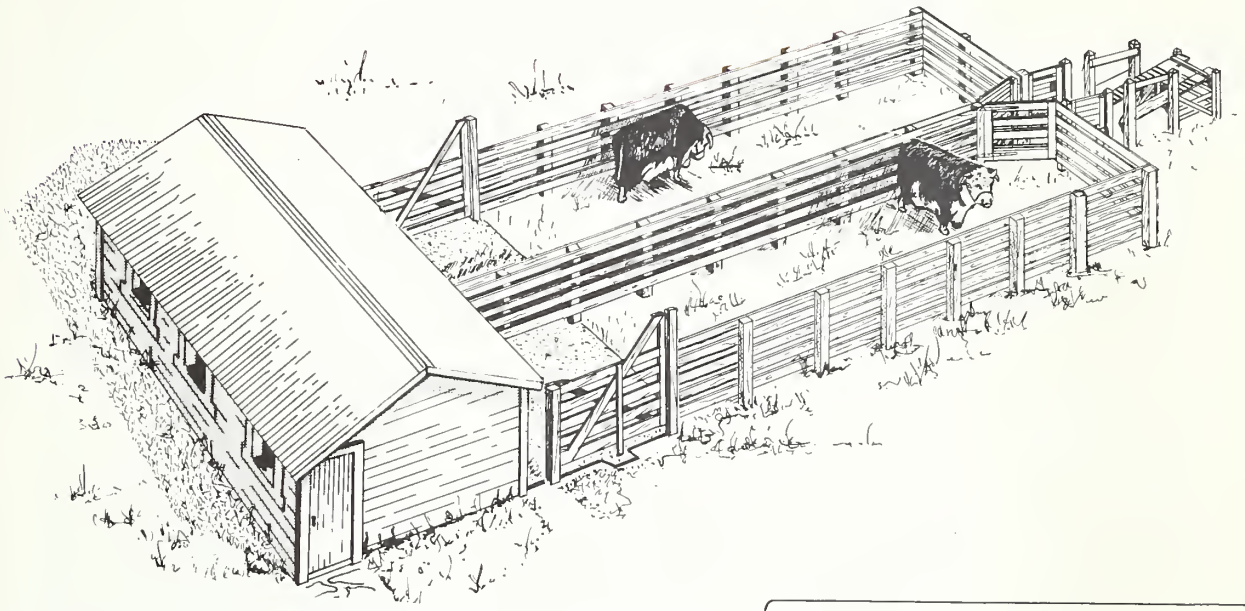
# TWO-PEN BULL BARN AND LOTS

FARM BUILDING
PLAN NO. 5851
(3 SHEETS)



This two-pen bull barn with lots provides secure and comfortable facilities for the separate housing and exercising of two bulls.

The building is frame and the floors are concrete. The pens are separated from the lots by fences and sliding gates. The gates are operated from the feed alley by means of ropes. This open side of the building should face south or east, away from cold winds. Walls should be tight to protect the animals from drafts.

Fence posts and other wood in contact with the ground should be pressure treated with preservative.

The working drawings include complete details for construction of a permanent breeding rack.

Complete working drawings may be obtained through your county agent or from the Extension agricultural engineer at most State agricultural colleges. There is usually a small charge.

ORDER PLAN NO. 5851, TWO-PEN BULL BARN AND LOTS

If working drawings of this plan are not available in your State, write to the U. S. Department of Agriculture, Agricultural Engineering Research Division, Plant Industry Station, Beltsville, Md. The U. S. Department of Agriculture does not distribute drawings, but will direct you to a State that does distribute them.
